

While email has become the de facto business communications medium, it has also added complexity and risk to day-to-day business. Aside from the network-crippling effects caused by malicious threats like spam and viruses, many businesses today are also struggling with storing their growing volume of legitimate email messages. This task becomes increasingly important due to a growing list of factors including regulatory and compliance requirements, legal discovery and investigations (e-discovery), business continuity, and disaster recovery.

Long View's Email Archiving solution combines industry-leading best practice compliance with powerful administrative capabilities delivered on a Software as a Service (SaaS) platform. This comprehensive service is fully managed, requiring no hardware or software integration, little or no capital costs, and offers unmatched usability and the following key features:

- Evidentiary-quality records are systematically stored in a central tamperproof repository
- "Simple" and "Advanced" search modes
- Archiving of all internal, inbound, and outbound mail (with attachments)
- Ease of administration and use through a secure Web-based platform
- Scalable storage with definable retention periods
- Compliance support features
- 24x7 telephone, email, and online support included
- Convenient and predictable month-to-month contract terms

The Added Value of Long View's Email Archiving Services

While helping to protect your organization from the many legal ramifications that can result from improper storage and retrieval of email messages, our Cloud-based Email Archiving service can also help you to reduce costs and increase operational efficiencies.

Free IT from on-going service management and retrieval tasks

In the Cloud, there is no hardware or software to install, integrate, or maintain, and continual updates to features and functionality ensure that the service never grows obsolete. End-users can search for their own archived messages directly on a familiar interface.

Reduce internal storage requirements and costs

Email Archiving in the Cloud lets you consolidate .pst files in order to secure company knowledge and shrink your Microsoft Exchange databases to a more manageable size. Storage capacity and retention periods can be easily scaled to meet changing business needs.

Ensure that message stores are up-to-date and reduce costs with rapid message retrieval

Long View provides near-real time email archiving, which is more accurate and less prone to data loss than delayed point-in-time snapshot backups. Users can retrieve messages in a matter of seconds, cutting time and costs, particularly relating to legal fees associated with e-discovery.

Contact Us

If you have any questions about our services or would like to discuss your requirements with one of our team then please contact us. We look forward to hearing from you.

Secure message transport and storage with full disaster recovery

Messages are transported to the Email Archiving service securely via TLS or SSL and are stored using 256-bit encryption. Messages are stored at fully redundant, secure off-site locations ensuring that there is no single point of failure.

Ensure reliability, performance, and compliance

Don't worry about corrupt indexes or poor reliability associated with many on-premise solutions. Your messages are always available in seconds and tamperproof read-only storage keeps them protected in their original state, removed from your servers only when properly verified.
