VULNERABILITY SCANNING

Gain critical insight into the Vulnerabilities that exist in your network ecosystem

KEY BUSINESS DRIVERS

Does any of this sound familiar?

- > Users expect access from any device, anywhere, anytime, and your workforce demands the latest features and versions but how to do this securely?
- > The more S/W and H/W that's deployed, the harder it is to patch and remain secure?
- > Often, upgrades are happening in an adhoc manner, but you never feel like you have a secure baseline. It might feel like you never reach your goals.
- > Phishing and Spoofing attacks are constant – we can't keep up!
- > Compromised systems go undetected for weeks or months, where to focus first?
- > Somebody in the organization hears something, then we scramble to determine our exposure because someone upstairs perceives an exposure. It's simply not productive and does nothing for trust and confidence.
- > Do we know if our systems are secure, alternatively where are we exposed?
- > We can't possibly reach our compliance goals if we don't have a handle on this!

Vulnerability scanning utilizes leading edge software to scan a client's network and examine the operating systems and subsystems to determine if they possess vulnerabilities. These vulnerabilities are ranked in criticality based upon whether known exploits exist and their ease. A regular and ongoing vulnerability assessment program is a critical part of every organization's IT security program that cannot be ignored.

Long view's ongoing vulnerability assessment service leverages expertise built over multiple years across clients of all sizes and verticals, with flexible packages to include either monthly, bi-monthly, quarterly, semi-annual, annually or one-time scanning and reporting.

VALUE PROPOSITIONS

By choosing Long View, **we offer:**

- Industry leading technology for the most thorough and accurate scans of your network to understand where vulnerabilities exist
- Well suited to address on-premises, on-demand and private cloud infrastructure
- Portal and report visibility of your systems in need of patching and your progress over time
- Referenceable correlation to vulnerability descriptions and exploit methods
- Flexible Vulnerability Management programs to suit your ability to patch
- Tailored custom assessments are also available to address; Cloud Infrastructure, Web Applications, or Attack Path analysis using specialized tools
- Simple and easy billing

SERVICE OUTCOMES

By choosing this service, Long View **enables your business** to:

- Build in regular Vulnerability Assessments as a critical part of your organization's ongoing IT security program
- Easy and relevant vulnerability information sharing on a regular basis
- Enhance and improve your existing IT Patching & Remediation Programs
- Cost effective way to take advantage of industry leading cybersecurity expertise
- Helps support justification for further remediation initiatives and prioritization that is tailored to your organizations needs and risk profile
- Allows you to improve your security posture and show demonstrable improvements on an ongoing basis to your business
